

FROM FREE DATA TO FAMILY-FRIENDLY WORKING - A YEAR OF ACHIEVEMENT IN ICELAND

Digital maps and spatial data from the National Land Survey Iceland (NLSI) is now available free of charge via www.lmi.is. By providing easy access to authoritative environmental and natural information, it is hoped to encourage greater use, processing and dissemination of official data in areas such as tourism, public administration and education.

NLSI was also named Medium-sized Institute of the Year for its commitment to family-friendly working in an employee survey carried out by the country's two main trade unions and Ministry of Finance. With around 200 agencies taking part, it is Iceland's largest regular labour market survey and provides important information about the status of workers. Participants are asked about work-related factors such as the credibility of management, autonomy, workload, working conditions, stress, demands and flexibility.

In addition, the organisation became the first public authority to receive equal pay certification from the VR trade union, the largest in Iceland. This confirms that salary decisions are codified, that employees holding the same or comparable jobs have equal salaries and that the equal pay salary system has been established according to the requirements of the IST 85:2012 equal pay standard.
