

Geodetic Activities in Germany

Jan Dostal

Responsibility for Surveying in Germany

- Surveying is in the responsibility of the German states ("Länder")
- 16 regional responsibilities, laws, agencies, ...
- Surveying belongs to different ministries in the 16 countries, e.g.
 - Ministry of the Interior
 - Ministry of Finances
 - Ministry for rural area and consumer protection
 - Ministry for infrastructure and agriculture

Responsibility for Surveying in Germany

- Colaboration of the surveying authorities within the "Working Committee of the Surveying Authorities of the Laender of the Federal Republic of Germany" (AdV)
- Federal members are Ministry of the Interior (BMI) –
 represented by BKG, Ministry for Traffic and Digital
 Infrastructure (BMVI) represented by BfG, and Ministry for
 Defense (BMVG) represented by ZGeoBW
- What about BKG?
 - Since 2012, a new law called BGeoRG is explicitly mentioning BKG and its responsibilities (§ 3)
 - BKG is a Higher Federal Authority under the Ministry of the Interior (since 2018: Ministry of the Interior, Building and Community – BMI)

Introduction of Integrated Geodetic Spatial Reference 2016

All components
of the geodetic spatial reference
(3d-position, height, gravity)

have been planned, measured/observed and analyzed together in a common measurement epoch

Timeline of the project

01.12.2016

Jahr	20-	02	03	04	05	06	07	08	09	10	11	12	13	14	15	16	17
First ide	ea	+															
Start of the project																	
Levelin	gs																
GNSS ca	ampaign																
Absolute gravity measurements																	
Strategy Workshops										♦	>	♦	>	\Rightarrow	>		
Levelings in subordinated networks																	
Relative gravity measurements																	
Computation of the geoid GCG2016																	
Computation of the transformation model																	
Supply of SAPOS coordinates in ETRS89/DREF91/20																Z	X
Transfer of DHHN2016 heights into official register of the German States																	

Integrated Geodetic Spatial Reference 2016

Introduction of the components

- DHHN2016: new official realization of the German height reference system
- ETRS89/DREF91/2016: improved coordinates for the German reference network SAPOS®
- GCG2016: new official quasigeoid (German Combined Quaisgeoid)
- DHSN2016: official gravity reference frame
 - Many (>150?) new absolute measurements validation of the level
- HOETRA2016: module for height transformation from DHHN92 to DHHN2016

German principal leveling network DHHN2016

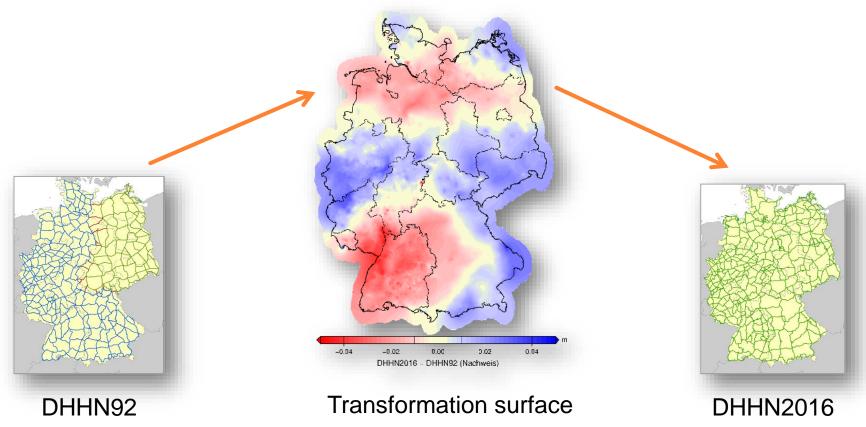

- Normal heights referred to NAP
- Mean tide system
- Height differences to former realization DHHN92: +/- 35 mm (except for mining areas)

Parameter					
lines	991				
Nodal points	680				
Datum points	72				
degrees of freedom	311				
s ₀ of 1 km leveling	0.64 mm				
Length of overall loop	5 350 km				
Closing error of overall loop	13.7 mm				
Number of leveling points	59 583				
Total length of measurements	29 809 km				

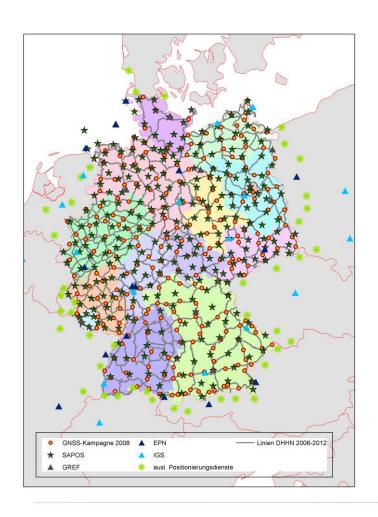

Transformation model HOETRA2016

www.hoetra2016.nrw.de

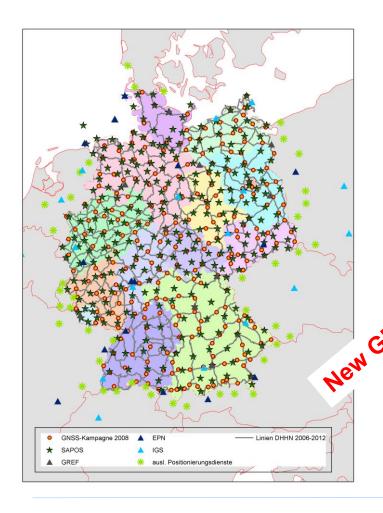

ETRS89/DREF91 Realization 2016

- GNSS campaign 2008
 - 250 control stations (GGP)
 - 350 reference stations (IGS/EPN/GREF/SAPOS)
- Adjustment without constrains (orbits IGS2005)
- Transformation into ITRF2005
- Transformation into ETRF2000 (memo 8)
- Systematic differences to the Realization ETRS89/DREF91(2002)
- Transformation into ETRS89/DREF91/2016 (3 rotations)
 - Differences in the position minimized (no relevant to real property cadaster)
 - Almost no height changes compared to ETRF2000

ETRS89/DREF91 Realization 2016

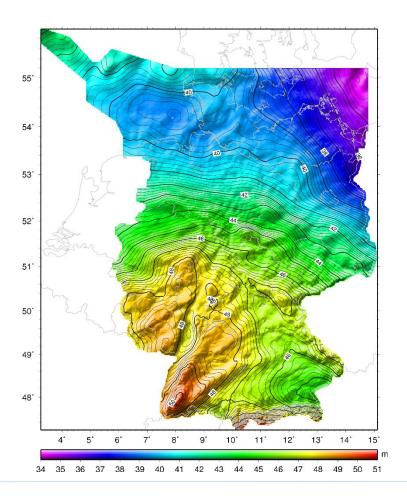

- GNSS campaign 2008
 - 250 control stations (C 3P)
 - 350 reference stati (IGS/EPN/GRETON US)
- Adjustment without constrains (orbits IGS2005)
 Transfy plantion into ITRF2005
- Tra mation into ETRF2000 (memo 8)
- matic differences to the Realization

RS89/DREF91(2002)

Transformation into ETRS89/DREF91/2016 (3 rotations)

- Differences in the position minimized (no relevant to real property cadaster)
- Almost no height changes compared to ETRF2000

German Combined Quasigeoid GCG2016

- Inclusion of GOCE data
- Denser terrestrial data
- Improvement of the software for terrain corrections and geoid modelling
- Residuals of the gravimetric quasigeoid including a correction surface to the GPS/leveling points:
 - Extrema -9 mm, +9 mm
 - Standard dev. +/- 3 mm

Positioning in Germany

- SAPOS is the German Positioning Service provided by the German states
- Approx. 275 stations
- Beside individual regional provision, central service, located in Hanover (NI)
- Provides various services (real-time, post-processing)
- Since 2010, special emphasis on quality management
- In 2018, new guidelines on "Monitoring of the coordinates of the reference station network"
- In 2019, test campaign for combination of individual regional solutions ("EPN-like")

Positioning in Germany

- Working Committee of the Surveying Authorities of the Laender of the Federal Republic of Germany (AdV)
- Working Group Spatial Reference (AK RB)
- SAPOS® Satellite Positioning Services of the German Landsurveying
- National Network around 270 Stations

Positioning in Germany

OPEN DATA politics

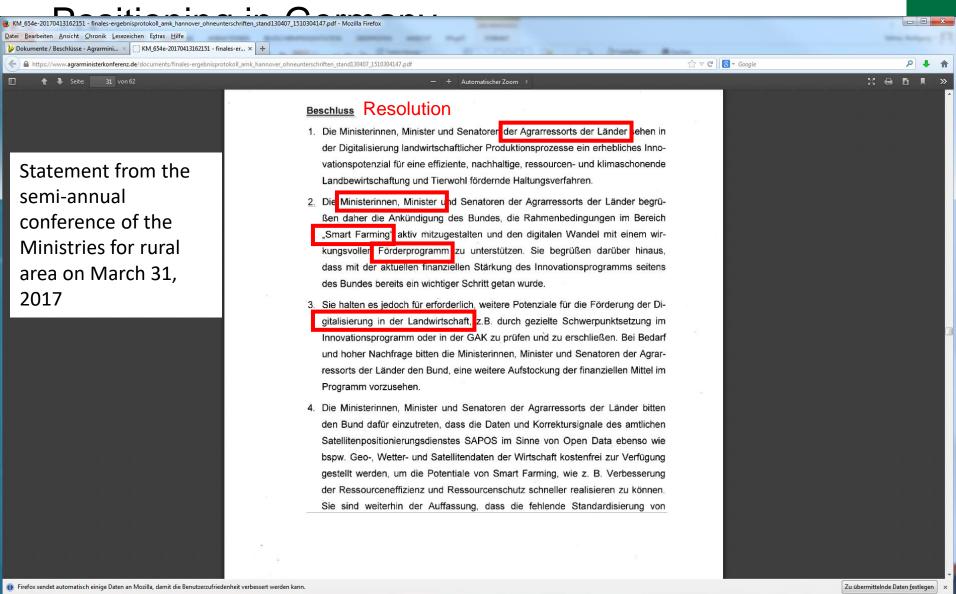

German states offering positioning services for free

- Thuringia
- Berlin
- North Rhine-Westphalia (since 1.4.2018)

For farmer/agronomist in rural areas only

- Bavaria
- Rhineland-Palatine

Anmeldung zum Landwirtschaftlichen Fahrzeugpositionierungsservice

Preisinformation

Bayerische Vermessungsverwaltung GeodatenOnline GDI-Bayern

die Nutzung der Korrekturdaten des Landwirtschaftlichen Fahrzeugpositionierungsservice (LFPS) ist kostenfrei

- o für die Anmeldung und Nutzerverwaltung fällt ein Entgelt von 50 Euro für drei Jahre an
- o bei Verlängerung des LFPS nach drei Jahren ist das Entgelt erneut fällig
- die Abrechnung erfolgt durch das Landesamt für Digitalisierung, Breitband und Vermessung nach Bereitstellung der Zugangsdaten

Laufzeit und Kündigung

- o die Laufzeit beträgt drei Jahre und beginnt mit Zustellung der Zugangsdaten
- Verlängerung der Laufzeit jeweils um weitere drei Jahre, sofern nicht mit einer Frist von drei Monaten schriftlich gekündigt wird

Anmeldung

Bitte halten Sie im Zweifel zunächst Rücksprache mit Ihrem Fahrzeughändler / Dienstleister, ob der LFPS auf Ihrem Fahrzeug einsetzbar ist.

Der Rechnungsversand erfolgt ausschließlich per Email.
