INSPIRE UN

Integrated in the KLIC service to
prevent excavation damages

Ing. A.L.M. (Ad) van Houtum MSc
Kadaster Netherlands
KEN Workshop 181127
Use of INSPIRE data

Topics

KLIC

- Know where underground cables and pipelines are,
 - Know who is planning to dig, when, for who, what, how ...
 - Contact between contractor and network operators
 - Take precautions
- ☺ Common interest: prevent excavation damage

KLIC, a service to prevent excavation damage

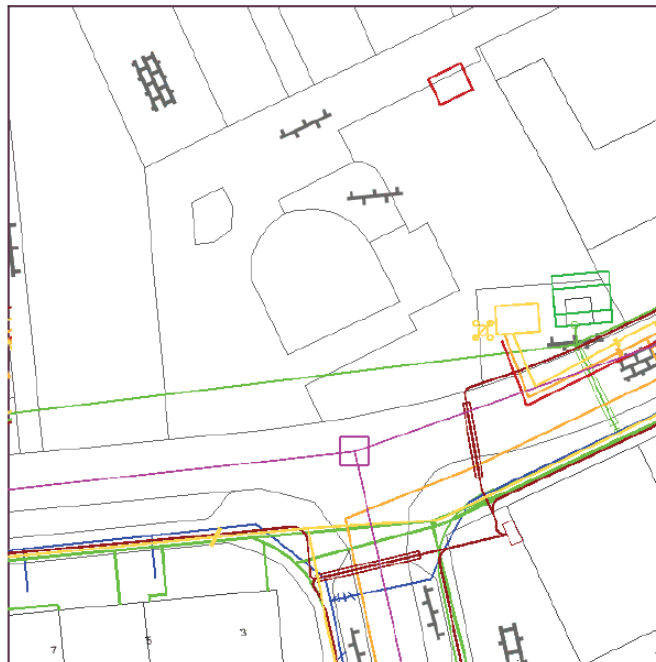

- Initiative of network operators
- One call system since 1968
- Simple procedure:
 1. Excavator reports his planned work at KLIC
 2. KLIC reports the work to the network operators involved
 3. Every network operator informs the excavator:
 - ✓ The network plans of the reported working area
 - ✓ The data of the contactperson
 - ✓ Precautions to be taken
- Report by: telephone > +fax > +email > internet
- Network plans: paper > bmp > transparant PNG

Information 2008-2018

| | | |
|------------------------------|---------------------------|------------------------|
| Klicnummer: 12O003662 - 1 | Aanvraagdatum: 26-01-2012 | Bladzijde 1 van 9 |
| Verzamelkaart (alle thema's) | | |
| KPN datatransport | bw water | Ziggo BV datatransport |
| Erexis gas hoge druk | Erexis laagspanning | Erexis middenspanning |
| Erexis gas lage druk | epoelshout riool vrij/eva | |

| Theme: | | | |
|-------------------|------------|------------|--|
| Gas low pressure | Or/Yellow | 255,215,80 | |
| Gas high pressure | Or/Yellow | 255,175,60 | |
| (Petro)chemical | Brown | 182,74,0 | |
| Sewer reg.flow | Purple | 186,56,168 | |
| Sewer w/pressure | Violet | 128,0,128 | |
| Warmth | Green/Bleu | 0,128,128 | |
| Water | Bleu | 0,0,255 | |
| Orphan | Black | 0,0,0 | |
| Other | Black | 0,0,0 | |

Research

- The industry needs a continuous improving service
- Also: I needed a master project for my study

Research question 2012:

“What do stakeholders expect from future information exchange of underground infrastructure in the Netherlands, within the context of national and European legislation and what conceptual architecture fits best?”

Strategic goals

1. Less excavation damages
2. More efficient information process
3. Share information in other domains

User demands:

- Ubiquitous
- Analizable
- Interoperable
- + More area information
- + Filing system

INSPIRE

- 90+% network operators are obligatory
- Deadline: 3/12/2013
 - Metadata on national registry NGR
 - WMS/WFS with data as is
 - Meeting QoS
- Deadline: 2020
 - Harmonized data

KLIC versus INSPIRE

| |  |  |
|----------------|---|---|
| Vector data | √ | √ |
| Standardized | √ | √ |
| WMS / WFS | √ | √ |
| QoS | + | ++ |
| Open | √ ... | X |
| Free | √ ... | X |
| Unlimited area | √ | X |
| Anonymous | √ ... | X |
| Complete | X | √ |

KLIC meets INSPIRE

- Datamodel: INSPIRE extended
- Central portal for all KLIC-products
- INSPIRE as an extra product of KLIC
 - Sign up procedure
 - Request procedure
 - Delivery procedure
 - Rate based
 - Telecom does not join!

☺ INSPIRE does not cannabilize KLIC

Roadmap

Legal issues

- WION
- INSPIRE
- GDPR (privacy)
- Building 95% ready
- Implementation first products in january
- Transistion period 6 months

Benefits from INSPIRE

- Need to standardize
- Vector data
- Webservices
- Collaboration within the sector
- Sense of urgency

However ...

- Incomplete (telecom is missing)
- NL-dataset is richer
- No usecase for pan-European dataset (?)
- No users for the INSPIRE-product in NL
