Production of this year (TRANS, POP):

- All countries have delivered the data;
- Waiting for lineage and metadata on PMS;
- Data ready to assemble and will be delivered to PMT on time (2020.09.30)

Problems:

- The main problem is that the validation tool found and shows errors that are not real errors. It takes time to analyze if is it a real error, or is it an error that doesn't have to be corrected;
- This year all countries have corrected the data as much as possible but will try to find time to find such errors and send them to Tony and Marieke, so that they can continue to improve and make a better Validation tool;
- Tony also suggested maybe they could do a teams meeting with the people who have questions regarding the tool.
