

Implementation of quality model for evaluating and documenting quality in map composition process

Ioannis Kavadas
Rural, Surveying and Geoinformatics Engineer, MSc, PhD
Head of Internal Audit Unit
Hellenic Cadastre
Member of Quality KEN

Hellenic Cadastre – About as

The legal entity under public law with the name "Hellenic Cadastre", was established by Law 4512/2018, and is supervised by the Ministry of Digital Governance (Presidential Decree 3 / 6.1.2021).

The purpose of the Hellenic Cadastre is to ensure the reliability, publicity and availability of spatial and legal data related to real estate and to ensure public trust and security of transactions.

This purpose is achieved through the development, maintenance and operation of the National Cadastre, ensuring the publicity of the legal (registrable rights and encumbrances) and technical (location and boundaries) information from all the real property transactions registered in it.

Its purpose also includes the geodetic and **cartographic coverage** of the country, as well as the creation and maintenance of digital geospatial data.

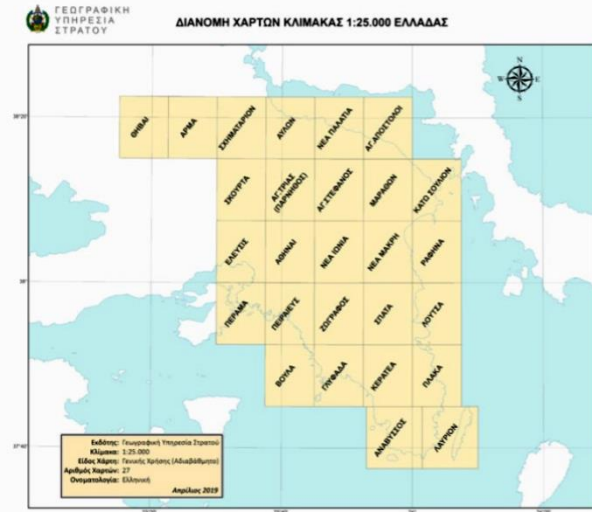

Production of Topographic Map at scale 1:25.000

The "Hellenic Cadastre" as National mapping Agency, is responsible for the production, maintenance and revision of basic and value-added topographic maps and topographic diagrams.

Project

Background

Hellenic Geographical Military Service
It has published 27 map sheets at a scale of
1:25,000
They have not been revised since the 1980s

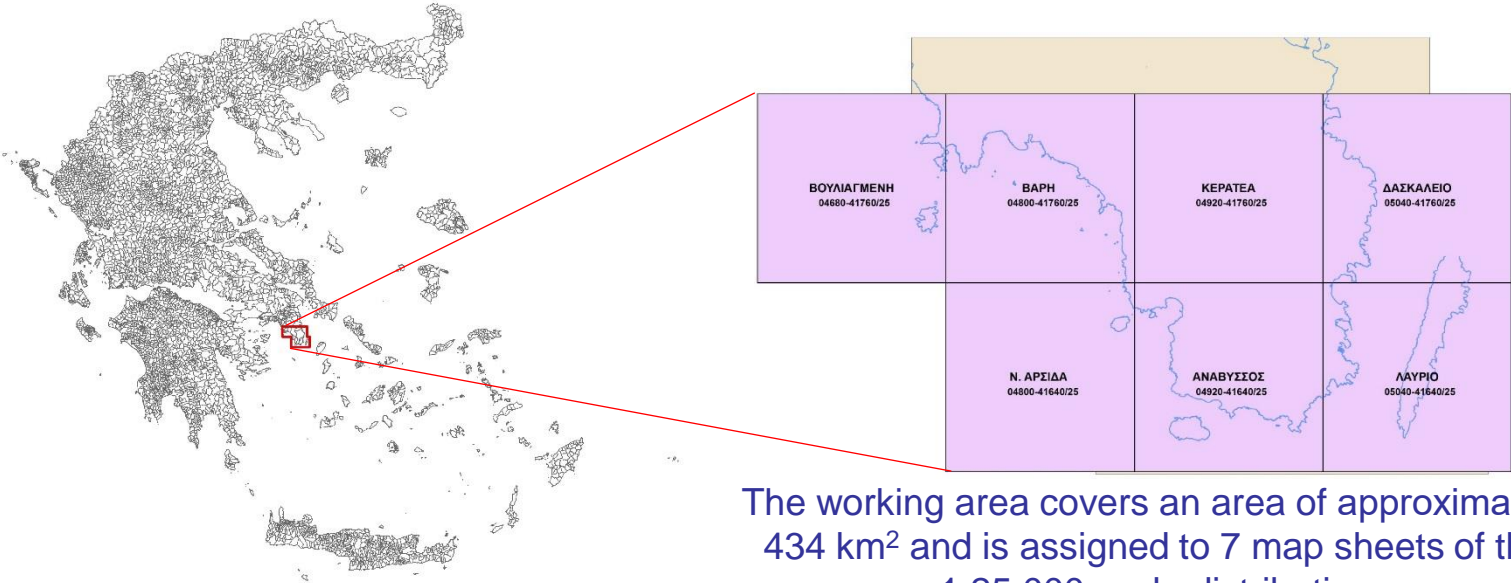

Pilot project area

Goal

Running of a pilot project for the production of 1:25.000 scale maps, using as basic data the geospatial data available from the Hellenic Cadastre.

Quality management in the map synthesis process

The pilot project involves the development and implementation of an integrated environment for monitoring and documenting quality in the mapping process. The methodology described involves the design and implementation of Quality Model based on the ISO 19157:2013 standard.

The working area covers an area of approximately 434 km² and is assigned to 7 map sheets of the 1:25.000 scale distribution

Basic data

Hellenic Cadastre

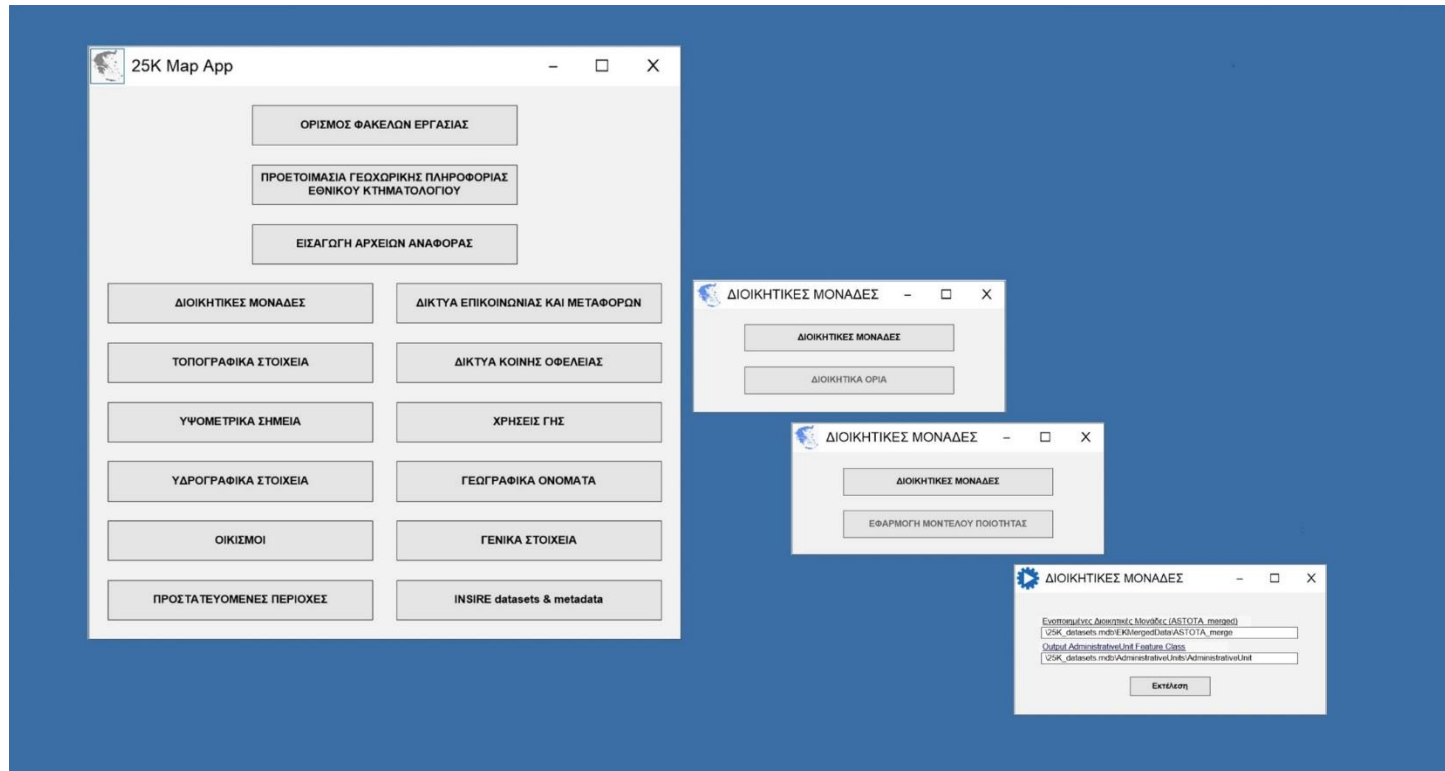

- Cadastral parcels (includes the road, railway and hydrographic network)
- Land uses
- Geographical names
- Orthophotos
- Digital Elevation Model
- Coastline
- Protected sites (e.g. NATURA areas)

Other sources

- Hellenic Statistical Authority (Population data)
- Hellenic Navy Hydrographic Service (Bathymetry)
- Hellenic Train S.A. (Categorization of railway network)
- Hellenic Commission for Large Dams (spatial location of dams).

Conclusions

Provides, through the developed software application, the possibility of approximately 90% automation of the production process of the 1:25,000 scale map for the country, utilizing cadastral data, significantly reducing production costs and required resources.

Quality model provides an integrated structured quality assurance environment at every stage of the map composition process. It enables the producer to have a high level of control over the production process, to identify and manage errors, and to improve the production process and the quality of a product.

As a result of the implementation of the proposed quality models, the produced map has a known and documented quality.

Use of international standards in the development and implementation of the quality model and the harmonization of quality information with them

- ✓ ensures the interoperability of quality information, and
- ✓ provides an environment for applying consistent and objective quality inspection methods.

Feature work

Future research may focus on the following:

- **Quality issues**

- ✓ To analyze the needs, in terms of quality, of the different users of spatial data, by identifying and effectively recording how many and which of the quality parameters users want to be recorded and how.
- ✓ To improve the way in which the results of the quality inspection are recorded and presented so that they are more comprehensible to the average user. ISO 19157:2013, although estimated to be complete and detailed in the documentation of the quality results and their recording, is mainly intended for specialized users.

- **Map improvement issues**

- ✓ Revision of specifications to improve the 1:25,000 scale map.
- ✓ Production of maps of various scales with documented quality, adopting the methodological approach proposed for the process of map synthesis.
