

OME2 – New production process for a high-value large-scale database

Noémie Grémeaux (IGN France)

Co-funded by the European Union

Overview of the process

Co-funded by the European Union

eurogeographics

Objectives

To set up a workflow to create and maintain:

A central pan-European high-value large-scale prototype (HVLSP)

> 3 themes:

- Administrative units (AU)
- Transport network (TN)
- Hydrography (HY)
- 10 countries by 2025 (to be extended afterwards)

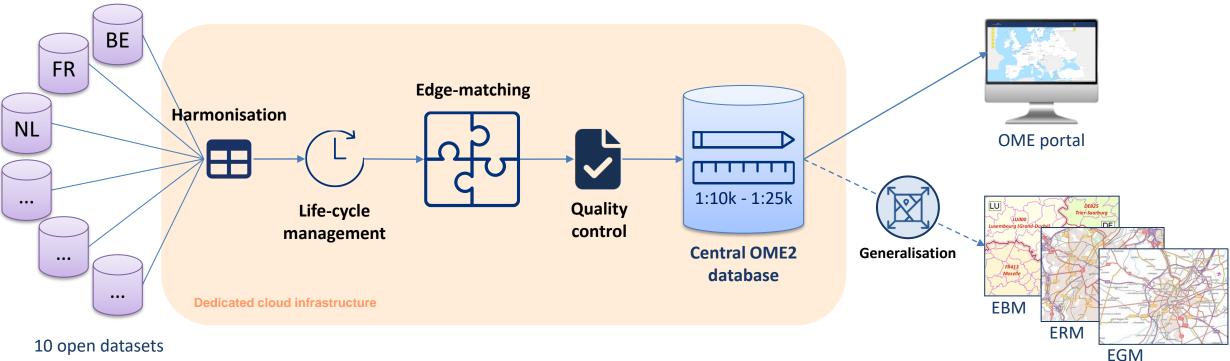

The OME2 approach:

- Centralised process
- Minimal additional workload for national producers
- Re-use results from previous projects
- A technical and practical approach to harmonisation:
 - Take into account feedback from users
 - Technical (not political) solutions
 - Highly automated

Future production process

10 open datasets provided by national producers (INSPIRE or national data model)

Challenges

Co-funded by the European Union

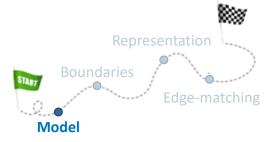

Challenge #1 – Common data model

- Main focus: include UN-GGIM Europe core content and be able to derive EBM/ERM
- A data model which might evolve with the addition of new countries (e.g. more harmonised classifications...)

Target content of the HVLSP:

- Administrative unit areas levels 1 to 6
- Transport:
 - Road transport
 - Railway transport
 - Air transport
 - Water transport
 - Hydrography

٠

٠

- Watercourses
- Standing waters
- Dams/locks, falls
 - ...

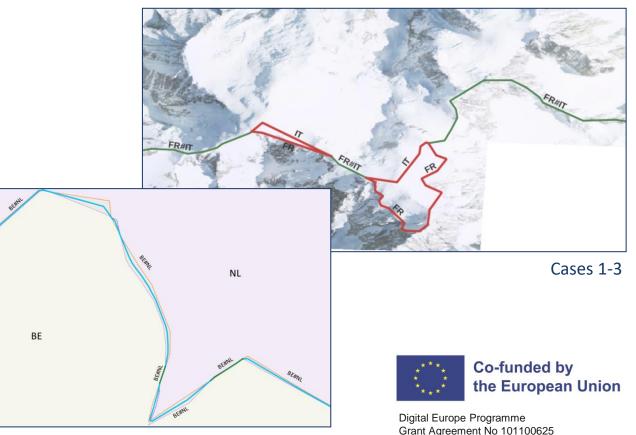

Challenge #2 – Common international boundaries

3 cases:

- ➢ Full agreement → official line
- \succ Theoretical agreement \rightarrow common technical line
- ➢ Disagreement → two lines

Representation Boundaries Edge-matching Model

Operational process to calculate common technical lines (FME)

Cases 1-2

Challenge #3 – Common representation

Countries can have different representations for the same objects (e.g. railway stations)

→ Keep all the available information but build a common core (from User requirements workshop #1)

Gare d'Austerlitz

Gare de Paris-Bercy

Beta version, to be configured/adapted to new countries available in June 2024 Based on mapping tables provided by national producers

HVLSP status

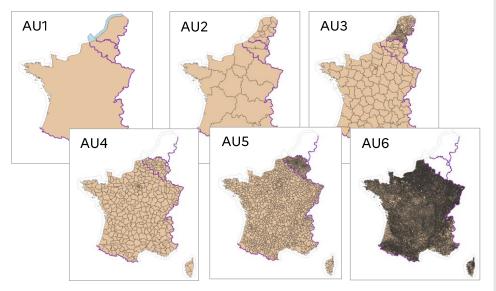

Current status of the HVLSP

	BE	FR	NL	LU	СН	CZ	AT	DE	?	?
Administrative units										
Transport network										
Hydrography										

V1.0/2.101ar01102020224

- HVLSP v1.0 successfully delivered in March 2024 on https://www.mapsforeurope.org/
- Edge-matching errors (objective < 15%):</p>
 - Roads: 1,24% (3,52% before manual corrections)
 - Other tables: 0%
- > Next steps: HY, cloud infrastructure, coverage extension

Administrative units

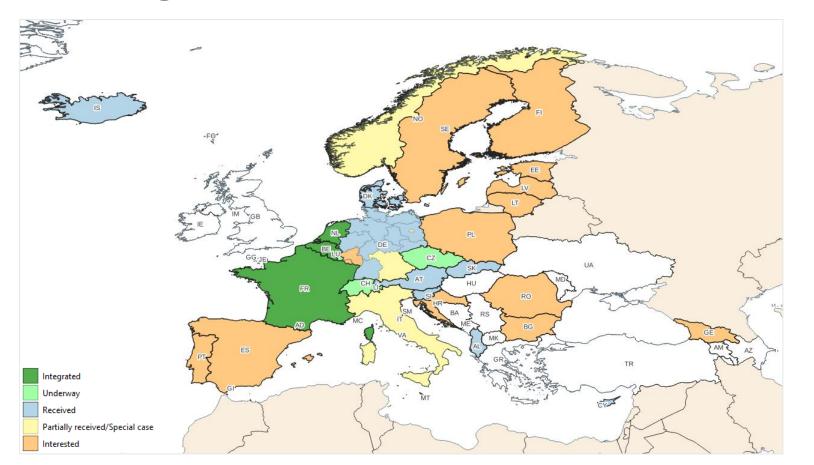

Road network

12 HVLSP status

Coverage extension

Copyright © 2023 EuroGeographics

www.eurogeographics.org

- Data received for:
 - o 12/EU27 countries
 - 17/43 EuroGeographics' members
- Many countries are willing to participate
- But a few do not seem to have all the data we need (GR?, BG?)
- Priority: get data from at least all EU27 countries for an inventory of what is available

Digital Europe Programme Grant Agreement No 101100625

Feedback

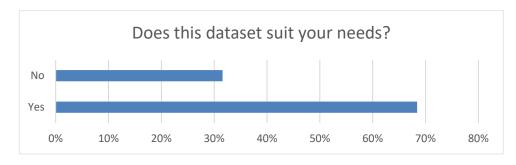

Co-funded by the European Union

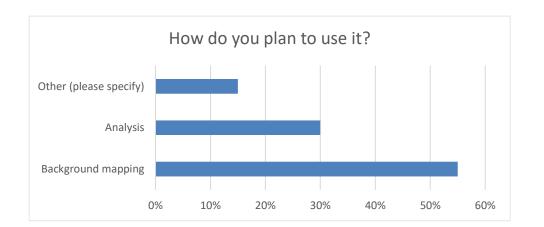

Feedback

Questionnaire sent by EuroGeographics before the summer \rightarrow 26 answers

- The available formats (WMS, WFS, WMTS, gpkg) are suitable.
- Suggestions:
 - General: names not in JSON format, more detailed metadata, extended coverage, update rythm
 - Additional information: area and population figures for AU, speed limits better filled

Improvements: coverage, update rythm

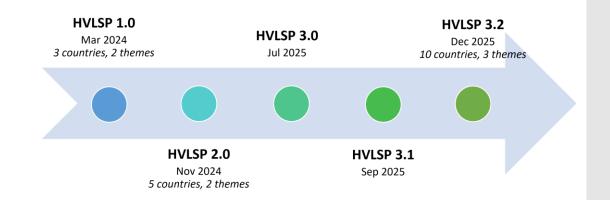

What we would like to know...

- Would an « industrialised » HVLSP dataset be useful to you?
 - EU27
 - Annual updates
- Is some information missing and preventing you from using it?
 - Additions to the data model
 - More themes
 - More countries (more than EU27)
 - More frequent updates
 - Other formats
 - ...

Thank you for your attention!
