Romania's ground-breaking year focuses on better serving users

2019 was an exciting and ground-breaking year for Romania, which for the first time since its accession, held the rotating Presidency of the European Union (EU) Council.

As a result the National Agency for Cadastre and Land Registration (ANCP) held the Presidency of the Permanent Committee of Cadastre (PCC) in the EU for the first semester of 2019.

Hosting the PCC Conference and Plenary meeting in Bucharest was a particular highlight for the Agency, offering an opportunity to contribute to the Committee's future activities. Together with the working group, ANCP made a thorough analysis of the best way to organise the PCC to better serve the members' needs and meet their expectations. Its findings and proposals were presented at the PCC Plenary meeting held by NLS Finland during the second semester of 2019.

During the past year, ANCP also improved the functionalities of Romania's INIS geoportal. Users are now provided with WMS services based on TopRO5 data sets, Romania's topographic reference plan in digital format, corresponding to the 1:5 000 scale, in national format. Users can create their own map by adding network services or local datasets and changing their symbology and defining information windows.

These capabilities support the central and local government in developing infrastructure projects, as well as private investors with access to geographic information that can be put together with other information of interest.

The poster for the PCC Conference is titled 'THE ECONOMIC IMPACT OF CADASTRE FOR THE SOCIETY'. It is held in Bucharest, Romania, on 6-7 June 2019. The poster features a stylized house icon, a red arrow pointing up with a Euro symbol, and silhouettes of people holding hands. Logos for EuroGeographics, PCC, ANCP, and romania2019.eu are visible at the top.
